We build what lasts.

نبني حلولاً تدوم.

Steel Builder was founded in Kuwait in 2012. The business then expanded into the United Arab Emirates, where the UAE company was established in 2019 — the Kuwait company continues to operate alongside it.

We work inside the UAE and internationally, specialising in steel structures for warehouses and private stores, cattle farms, poultry houses and villas, along with the wider range of projects built around steel. The company owns its own operating plant, so site requirements are covered by our own equipment and crews rather than subcontracted out.

تأسست Steel Builder في دولة الكويت عام 2012، ثم توسعت أعمال الشركة إلى دولة الإمارات العربية المتحدة، حيث تأسست الشركة في الإمارات عام 2019، مع استمرار شركة الكويت في مزاولة أعمالها.

تعمل الشركة داخل دولة الإمارات وعلى المستوى الدولي، وتتخصص في تنفيذ أعمال الهياكل المعدنية للمخازن والمستودعات الخاصة ومزارع الأبقار والمداجن والفلل، إضافة إلى مختلف المشاريع المتعلقة بالهياكل المعدنية. وتمتلك الشركة معدات تشغيلية خاصة بها لتغطية متطلبات العمل في جميع المواقع.

From workshop to site — one team, one standard.

من الورشة إلى الموقع — فريق واحد ومعياري واحد.

Roof structure • purlin grid

Portal frames • site erection

What we build.

ما الذي ننّفذه.

Six service lines, delivered separately or as one package under a single contract — including general contracting for the works surrounding the steel.

01 Workshop fabrication التصنيع في الورشة Cutting, welding, drilling, assembly and part marking, worked directly from approved shop drawings.	02 Steel structures الهياكل المعدنية Columns, beams, portal frames and wide-span warehouses for industrial and commercial facilities.
03 Site erection التركيب في الموقع Lifting, alignment, bolting and on-site welding, carried out by our own erection crews.	04 Sandwich panel الساندوتش بانل Insulated roof and facade panel systems, installed with the associated flashing and trims.
05 Cladding التكسية المعدنية Metal cladding, facade detailing and accessories, finished to the architectural drawings.	06 Civil & concrete works الأعمال المدنية والخرسانية Excavation, compaction, base plate fixing and integrated civil finishing works with the concrete works.

FABRICATED FRAME • WORKSHOP OUTPUT

03 — CAPABILITY

Workshop fabrication

التصنيع في الورشة

Steel arrives as raw sections and leaves as numbered, ready-to-erect members. Working from approved shop drawings means the connections fit on the first attempt, and the crane time on site is spent lifting rather than correcting.

- + Cutting and profiling to drawing dimensions
- + Drilling, bolting preparation and part marking
- + Loading and transport to site on the erection sequence
- + Welding of built-up sections and connections
- + Assembly and dimensional checking before dispatch
- + Coordination with consultant and main contractor

MAIN FRAME INSTALLATION • BOOM LIFTS

04 — CAPABILITY

Steel structures

الهياكل المعدنية

Wide-span frames for warehouses, workshops and industrial facilities — columns, rafters, bracing and purlin systems supplied and installed as a complete structure.

- + Portal frames and wide-span roof structures
- + Mezzanine floors and supporting steelwork
- + Structures built to the project's own drawings
- + Columns, rafters, bracing and purlin grids
- + Base plates and anchor coordination with civil works
- + Delivered complete, or fabrication and erection separately

PRIMARY BEAM LIFT • CONTROLLED SEQUENCE

05 — CAPABILITY

Site erection

التركيب في الموقع

Every lift follows a sequence: members set out on the ground, columns aligned and anchored, frames raised and temporarily braced, then bolted and welded to final position. Our crews work with mobile cranes and elevating platforms under a defined lifting plan.

- + Setting out and preparation before the lift
- + Column alignment and anchoring to foundations
- + Frame lifting with mobile cranes and boom lifts
- + Temporary bracing before final connection
- + Bolting, connection welding and final checks
- + Defined lifting plan and site safety measures

Panels, cladding & civil works

الساندوتش بانل والتكسية والأعمال المدنية

The structure is only part of the building. We close it in and prepare the ground it stands on, so one contract covers the envelope as well as the frame.

Site coordination • Abu Dhabi

Column installation • anchoring

01 Sandwich panel systems

الساندوتش بانل

Insulated roof and wall panels installed with flashing, trims and closures to keep the envelope sealed.

02 Metal cladding

التكسية المعدنية

Facade cladding and detailing finished to the architectural drawings, including accessories and edge details.

03 Civil works and site preparation

الأعمال المدنية وتجهيز المواقع

Excavation, levelling, backfill and compaction, with heavy plant operated and managed by our team.

The difference is in the detail.

الفرق في التفاصيل.

01

Precision

الدقة

Members are fabricated to the drawing dimensions, so connections fit the first time and site corrections stay rare.

02

Quality

الجودة

Materials and welds are checked before anything leaves the workshop, not after it has already been lifted into place.

03

Safety

السلامة

Each site works to a defined lifting and erection plan, with temporary bracing in place before final connections.

04

Reliability

الموثوقية

A steady crew and a single point of responsibility for your project, from the first drawing to handover.

05

On-time delivery

التسليم في الموعد

An agreed programme with weekly progress reporting, so the main contractor is never guessing where the steel is.

Abu Dhabi

المشاريع — أبوظبي

KIZAD Project

IN PROGRESS

LOCATION KIZAD, Abu Dhabi

AREA 35,000 m²

DURATION —

SCOPE

Execution and erection of the steel structure on site — preparing, lifting and fixing steel members, with welding, connections and bolting.

ICAD Project

IN PROGRESS

LOCATION Industrial City, Abu Dhabi

AREA 8,000 m²

DURATION —

SCOPE

Steel structure and the works associated with it.

Across the UAE

المشاريع — مواقع أخرى

Saih Shuaib Project

NEW

LOCATION Saih Shuaib

AREA 12,000 m²

DURATION 4 months

SCOPE

Steel structure erection and full site preparation.

Excavation, Compaction & Base Plates

COMPLETED SCOPE

LOCATION —

AREA 18,000 m²

DURATION 3 months

SCOPE

Excavation and compaction works, with preparation and fixing of base plates.

Habshan Project

COMPLETED

LOCATION Habshan

AREA 7,000 m²

DURATION 3 months

SCOPE

Steel structure — delivered and completed.

Royal Steel Project

IN PROGRESS

LOCATION Dubai

AREA 1,200 m²

DURATION —

SCOPE

Steel structure.

Let's build the right solution for you.
